Problems and Solutions Facing Education

Education has long been recognized as a powerful tool in the fight against systemic racism. Evaluating the operational systems in schools and colleges is necessary to ensure equal opportunities for all students. This course is designed to help students find solutions to current educational challenges.

Throughout this course, students will analyze the pedagogies and assessments used by teachers, professors, administrators, school counselors, and stakeholders. The goal is to close achievement gaps, help students with social and emotional learning, prepare them for college and careers, and ensure they graduate from college or post-secondary training with a purpose-driven job.

The course covers three domains of education: academic, social and emotional learning, and college and career readiness. Using these domains, students will learn how to collaborate with critical stakeholders, following the American School Counselors Association (ASCA) model. This course has been developed based on over 20 years of demonstrated effective experience in education. It aims to enhance critical and creative thinking skills, promote innovation in problem-solving, and equip students with usable knowledge that can be applied to any career path.

This Course fulfills the University multicultural and CAS group C breadth requirement.
